Lisa Naslund, PE, QSD/P

Lisa Naslund is a registered civil engineer and Head of the Private Development Stormwater Compliance for the County of Los Angeles Public Works. Lisa has been in the field of Stormwater Quality for over 13 years, as a leader, planner and innovator. She has reviewed and approved over 1,500 private development and capital projects. Lisa also developed and conducts the annual training for LA County's inspectors and staff concerning NPDES (National Pollutant Discharge Elimination) compliance and Low Impact Development. Her expertise has put in her demand throughout the County, providing training for the City of Beverly Hills and the LA County Chapter of ICC Building Officials, among others. Lisa played a key role among a consortium of experts responsible for developing Los Angeles County's Low Impact Development Manual. This signature policy manual has broad impact, respecting the diversity and vastness of LA County, the largest county in the nation, from its thriving urban areas to the stark desert areas of Antelope Valley and mountainous regions of Malibu and Calabasas.

Lisa is certified by the State of California as a Qualified SWPPP Developer and Practitioner. Private clients have included McDonald's Corporation, for whom she prepared compliance documentation, conducted inspections, and offered best management practices for their post-construction and construction erosion and sediment control. She has also provided her expert consultation services at other commercial, industrial, and residential sites. The field of stormwater compliance continues to be her passion and she's always seeking new innovative methods where development and regulation can co-exist and thrive.
